The claimed invention relates to a method and a device for reduction of a total delay of the traffic in a communications network carrying ATM traffic, wherein a multitude of users share a common physical medium. The invention is intended to overcome the problems associated with delay in a network with Constant Bit Rate traffic.

The solution according to the invention is characterised in that a period for generating ATM cells in the nodes and the time slots of the physical medium are synchronised both with regard to frequency and phase. Thereby the cells in the nodes have been packed at the same time as, or just before, transmission in a respective allocated time slot for a particular node.

without any inventive work, even if a person skilled in the art had knowledge of any combination of the technical solutions described in the documents cited in the International Search Report. With this in mind, the invention described in claims 1-10 is novel and is not obvious to a person skilled in the art. As there will be no doubt about the usefulness of the invention, all the stipulated criteria under PCT Art. 33 are fulfilled.
